

Hydroguard

Canadian Infrastructure Products is proud to offer the most economical oil grit separator on the market. The unique design and superior service makes Hydroguard the number one choice.

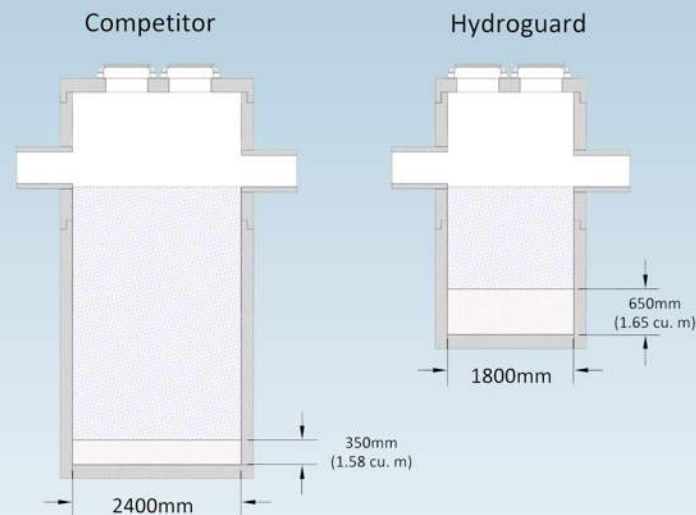

The Clear Choice:

With many benefits, the Hydroguard stands apart as the top choice for oil grit separators

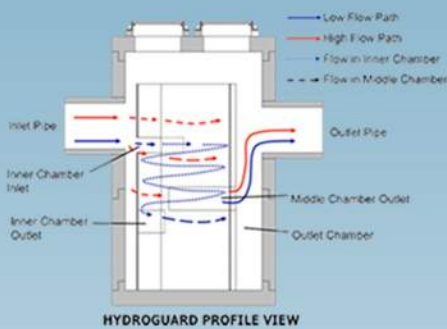

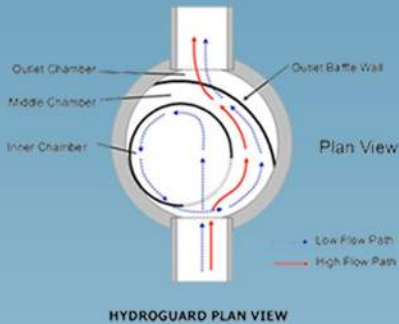

- Lower Cost
- Smaller Footprint
- Shallow Structures
- Customizable
- Canadian Technology
- Sizing Program Available
- Inspection Program

Smaller Products, Bigger Savings

Hydroguard is certified through the NJDEP (New Jersey Department of Environmental Protection, 2010) to treat up to three times the flow rate of some competitors' products. This results in a smaller, shallower, less expensive separator, that is cheaper to maintain, and yet holds the same amount of sediment as other larger units.

Unique Design

Hydroguard is the only stormwater treatment structure on the market that addresses the need to treat low flows differently from high flows. Hydroguard's unique design effectively treats both low and high flows – and their different pollutants – and contains them in separate treatment areas.

Available in a range of standard sizes from 1200mm to 3600mm in diameter, the hydroguard can be customized to meet the individual needs of each site. Contact our engineering department to design custom structures for larger drainage areas, shallow units, or any other special provisions needed.

Service from start to finish

We are committed to providing not only the best product, but also the best service! To assist in the planning stages, you can download our sizing software, or contact our engineers and we would be happy to size it for you. Once the unit is installed we offer ongoing support which includes a 2 year inspection program.
